

AMENDMENTS to the CLAIMS

A detailed listing of all claims that are, or were, in the present application is provided below. The status of each claim is identified, and markings indicate changes that have been made to any claims being currently amended by this Amendment.

1-2. (CANCELLED)

3. (NEW) A method comprising:
receiving transaction data associated with a customer transaction;
retrieving a customer record based on the transaction data, the customer record including account information identifying a primary account holder and at least one sub-account holder;
determining that at least one of the primary account holder and at least one of the sub-account holders is present;
transacting with at least one of a present primary account holder and a present sub-account holder;
determining a reward; and
allocating the reward according to at least one rule to at least one of a primary account holder and any sub-account holders determined to be present.

4. (NEW) The method of claim 3, in which receiving transaction data further comprises receiving frequent shopper data.

5. (NEW) The method of claim 3, further comprising cancelling the transaction if the primary account holder is absent and a sub-account holder fails to present authorization data.

6. (NEW) The method of claim 5, wherein the authorization data comprises a personal identification number of the primary account holder.

7. (NEW) The method of claim 3, in which determining if at least one of the primary account holder and at least one sub-account holder is present comprises receiving physical presence information.

8. (NEW) The method of claim 7, wherein the physical presence information comprises at least one of typed data, voice data, license plate data, biometric data, audio-spatial data, voice recognition data, handwriting recognition data, fingerprint data, retinal data, credit card data, smart card data, data from a touchscreen, and data from an input device.

9. (NEW) The method of claim 7, further comprising:
evaluating the transaction based on at least one of the physical presence information and the transaction data; and
updating the customer record in accordance with the evaluation.

10. (NEW) The method of claim 9, in which updating comprises at least one of adding reward points, subtracting reward points, calculating a reward level, and allocating a calculated award level to at least one of the primary account holder and at least one sub-account holder.

11. (NEW) The method of claim 3, wherein the reward comprises at least one of an immediate discount associated with the transaction, an increase in reward points, a future discount, a coupon, and a monetary rebate.

12. (NEW) The method of claim 3, wherein the at least one rule comprises at least one of transaction rules, reward rules, physical presence rules, and affiliation rules.

13. (NEW) The method of claim 3, further comprising, prior to determining if at least one of the primary account holder and at least one of the sub-account holders is present:
transmitting display data including account member indicia associated with a frequent shopper account for display on a display device; and
providing a prompt to select at least one of the account member indicia which corresponds to the identity of at least one of the primary account holder and the sub-account holders.

14. (NEW) A computer readable medium storing instructions configured to direct a processor to:

- receive transaction data associated with a customer transaction;
- retrieve a customer record based on the transaction data, the customer record including account information identifying a primary account holder and at least one sub-account holder;
- determine that at least one of the primary account holder and at least one of the sub-account holders is present;
- transact with at least one of a present primary account holder and a present sub-account holder;
- determine a reward; and
- allocate the reward according to at least one rule to at least one of a primary account holder and any sub-account holders determined to be present.

15. (NEW) The computer readable medium of claim 14, in which the instructions for receiving transaction data further comprise instructions configured to direct the processor to receive frequent shopper data.

16. (NEW) The computer readable medium of claim 14, which further comprises instructions configured to direct the processor to cancel the transaction if the primary account holder is absent and a sub-account holder fails to present authorization data.

17. (NEW) The computer readable medium of claim 14, in which the instructions for determining if at least one of the primary account holder and at least one sub-account holder is present comprise instructions configured to direct the processor to receive physical presence information.

18. (NEW) The computer readable medium of claim 17, which further comprises instructions configured to direct the processor to:

- evaluate the transaction based on at least one of the physical presence information and the transaction data; and
- update the customer record in accordance with the evaluation.

19. (NEW) The computer readable medium of claim 18, in which the instructions for updating the customer record comprise instructions configured to direct the processor to at least one of add reward points, subtract reward points, calculate a reward level, and allocate a calculated award level, to at least one of the primary account holder and at least one sub-account holder.

20. (NEW) The computer readable medium of claim 14, in which the instructions for determining the reward comprise instructions configured to direct the processor to provide at least one of an immediate discount associated with the transaction, an increase in reward points, a future discount, a coupon, and a monetary rebate.

21. (NEW) The computer readable medium of claim 14, in which the instructions for allocating the reward comprise instructions configured to direct the processor to utilize at least one of transaction rules, reward rules, physical presence rules, and affiliation rules.

22. (NEW) The computer readable medium of claim 14, which further comprises instructions configured to direct the processor to, prior to determining if at least one of the primary account holder and at least one of the sub-account holders is present:

transmit display data including account member indicia associated with a frequent shopper account for display on a display device; and

provide a prompt to select at least one of the account member indicia which corresponds to the identity of at least one of the primary account holder and the sub-account holders.

23. (NEW) A system, comprising:
a transaction controller including a microprocessor and a memory;
at least one input device operatively connected to the transaction controller; and
an output device operatively connected to the transaction controller;
wherein the at least one input device receives transaction data associated with a customer transaction, the microprocessor retrieves a customer record based on the transaction data, the customer record including account information identifying a primary account holder and at least one sub-account holder, determines that at least one of the primary account holder and at least one of the sub-account holders is present, transacts with at least one of a present primary account holder and a present sub-account holder, determines a reward, and allocates the reward according to at least one rule to at least one of a primary account holder and any sub-account holders determined to be present.

24. (NEW) The system of claim 23, further comprising at least one server in communication with the transaction controller, wherein the server comprises an input/output circuit, a microprocessor, and a memory including at least one of an awards rules database, an awards database, and entertainment programs.

25. (NEW) The system of claim 23, wherein the at least one input device comprises at least one of a biometric device, a voice recognition unit, a license plate scanner, a handwriting recognition unit, a fingerprint scanner, a retinal scanner, a barcode scanner, a touchscreen, a keyboard, and a computer mouse.

26. (NEW) The system of claim 23, wherein the microprocessor is further operable to update an account of at least one of the primary account holder and at least one sub-account holder.

27. (NEW) The system of claim 23, wherein the input device comprises a card reader, and the customer utilizes at least one of a frequent shopper card, bank card, credit card, debit card, and an affinity card to provide data.
